

PROJECT MANAGER

Metalline Mining Company is currently developing the Sierra Mojada Silver – Zinc Deposit in Coahuilla State, Mexico. The company is seeking a motivated project manager to lead the project through the current exploration program through “Preliminary Assessment” and subsequent “Feasibility Study”.

Job Description

Project Manager – Sierra Mojada Project

The Project Manager will report to the President of Metalline. An exploration program has been established for 2010. The Project Manager will be responsible for the following activities:

- Site geological exploration activities including site facilities, drilling, sampling, assaying, mapping, data compilation and QA/QC.
- Developing the scope of work for the Preliminary Assessment, selecting the engineering subcontractors and coordinating the activities required to provide the basis for the study including:
 - Resource estimates
 - Mine Plans
 - Metallurgical testwork programs
 - Metallurgical flowsheets
 - Process plant design
 - Geotechnical information
 - Site development plans
 - Infrastructure including power and water supply
 - Cost estimates
 - Environmental baseline and impact assessments
 - Community relations
- Managing the second phase of resource definition and data collection leading to Feasibility Study with all of the areas above taken to a better defined level of concept development and cost estimation accuracy.

The Project Manager will work closely with the management group of Metalline including accounting, legal, and operations management.

The candidate should have a strong background in advanced stage exploration and project development.

Education

- Undergraduate Degree in Sciences
- Graduate Degree in Sciences or Business

Experience

- Exploration experience with a clear understanding of the requirements for downstream engineering information requirements at the project evaluation level
- Participation in multi-disciplined engineering studies of precious and base metal projects
- A track record of participation in the actual development successful mining projects
- Some exposure to international project development
- Exposure to mining financial markets (especially in Canada) would be an asset
- Experience in making Project presentations to investors and financial analysts would be an asset
- Experience with public company administration and management would be an asset

Capability

- Good understanding of the mine development process
- Strong management skills with respect to scheduling and coordination of multiple geological and engineering disciplines
- Experience with scoping of engineering studies, project controls and contract administration
- Good interpersonal skills
- Well developed communications skills

Language Skills

- The Sierra Mojada Project is located in Mexico. An understanding of Spanish would be a definite asset.

Location

- The project is located at Sierra Mojada, Coahuilla State. The Project Manager will be expected to spend considerable time at site as required and where needed to manage engineering consultants and others contributing to the study work leading to project development.

Compensation

- To be negotiated.
